Welcome to AP Physics 2021-2022! Your summer assignment will include some textbook readings and practice problems. We will be using an online textbook for this class, so please follow the steps below in order to sign up, login and download your text book.

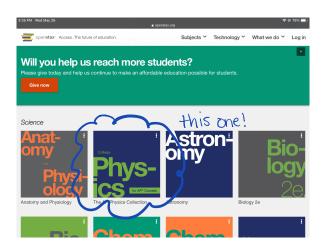

1. Sign up for OpenStax: Go to the following website URL: openstax.org You should land on a page that looks like the image below. I highly recommend that you sign up using your JBHA google account.

2. Now select Subjects, then Science at the top left hand corner of the screen.

3. The textbook you will use is the second option, "College Physics: for AP Courses".

4. You can either download a copy or use the online version. I recommend downloading the textbook.

Use of contents View online Download the ap Octave a print cop + 2 more options. Sign up to	The AP Physics Collection is a free, turnkey solution for your AP [®] Physics course, brought to you through a collaboration between OpenStax and Rice Online Learning. The integrated collection features the OpenStax College Physics for AP [®] Courses text, Concept Trailer video instructional videos, problem solution videos, and a correlation guide to help you align all of your free content. The College Physics for AP [®] Courses text is designed to engage students in their exploration of physics and help them apply these concepts to the Advanced Placement text. This book is Learning List-approved for AP [®] Physics courses.

5. Your summer assignment is to **read and take notes on sections 11.1-11.5 and 11.7 (pg 446-459, 464-470).** Make sure to check out each worked-out example given. This is where you will getting the all of your information for this material. Complete the following problems at the end of the chapter on pages 485-490. For density values, use the table on pg. 448. You may look up the mass of any common object such as the sun, an atom, etc. Conceptual Questions:

1-24, every 6th question (1, 6, 12, 18, 24) 30 Problems & Exercises 4, 6, 10 11, 13 14, 16, 20 25, 26 37, 39, 44, 47

Feel free to email me if you run into any problems or have any questions at dwilson@jbha.org. I have attached the AP Physics formula sheet below. You will have access to this on every assignment next year. Have a great summer!

CONSTANTS AND CONVERSION FACTORS						
Proton mass, $m_p = 1.67 \times 10^{-27}$ kg	Electron charge magnitude, $e = 1.60 \times 10^{-19} \text{ C}$					
Neutron mass, $m_n = 1.67 \times 10^{-27}$ kg	1 electron volt, 1 eV = 1.60×10^{-19} J					
Electron mass, $m_e = 9.11 \times 10^{-31}$ kg	Speed of light, $c = 3.00 \times 10^8 \text{ m/s}$					
Avogadro's number, $N_0 = 6.02 \times 10^{23} \text{ mol}^{-1}$	Universal gravitational constant, $G = 6.67 \times 10^{-11} \text{ m}^3/\text{kg}\cdot\text{s}^2$					
Universal gas constant, $R = 8.31 \text{ J/(mol}\cdot\text{K})$	Acceleration due to gravity at Earth's surface, $g = 9.8 \text{ m/s}^2$					
Boltzmann's constant, $k_B = 1.38 \times 10^{-23} \text{ J/K}$						
1 unified atomic mass unit,	$1 \text{ u} = 1.66 \times 10^{-27} \text{ kg} = 931 \text{ MeV}/c^2$					
Planck's constant,	$h = 6.63 \times 10^{-34} \text{ J} \cdot \text{s} = 4.14 \times 10^{-15} \text{ eV} \cdot \text{s}$					
	$hc = 1.99 \times 10^{-25} \text{ J} \cdot \text{m} = 1.24 \times 10^3 \text{ eV} \cdot \text{nm}$					
Vacuum permittivity, $\varepsilon_0 = 8.85 \times 10^{-12} \text{ C}^2/\text{N} \cdot \text{m}^2$						
Coulomb's law constant, $k = 1/4\pi\varepsilon_0 = 9.0 \times 10^9 \text{ N} \cdot \text{m}^2/\text{C}^2$						
Vacuum permeability, $\mu_0 = 4\pi \times 10^{-7} \text{ (T-m)/A}$						
Magnetic constant, $k' = \mu_0/4\pi = 1 \times 10^{-7} \text{ (T-m)/A}$						
1 atmosphere pressure, $1 \text{ atm} = 1.0 \times 10^5 \text{ N/m}^2 = 1.0 \times 10^5 \text{ Pa}$						

	meter,	m	mole,	mol	watt,	W	farad,	F
	kilogram,	kg	hertz,	Hz	coulomb,	С	tesla,	Т
UNIT SYMBOLS	second,	S	newton,	Ν	volt,	V	degree Celsius,	°C
SIMDOLS	ampere,	А	pascal,	Pa	ohm,	Ω	electron volt,	eV
	kelvin,	Κ	joule,	J	henry,	Н		

PREFIXES					
Factor	Prefix	Symbol			
10 ¹²	tera	Т			
10 ⁹	giga	G			
10 ⁶	mega	М			
10 ³	kilo	k			
10^{-2}	centi	с			
10^{-3}	milli	m			
10 ⁻⁶	micro	μ			
10 ⁻⁹	nano	n			
10 ⁻¹²	pico	р			

VALUES OF TRIGONOMETRIC FUNCTIONS FOR COMMON ANGLES							
θ	0°	30°	37°	45°	53°	60°	90°
sin 0	0	1/2	3/5	$\sqrt{2}/2$	4/5	$\sqrt{3}/2$	1
$\cos \theta$	1	$\sqrt{3}/2$	4/5	$\sqrt{2}/2$	3/5	1/2	0
tan 0	0	$\sqrt{3}/3$	3/4	1	4/3	$\sqrt{3}$	8

The following conventions are used in this exam.

- I. The frame of reference of any problem is assumed to be inertial unless otherwise stated.
- II. In all situations, positive work is defined as work done <u>on</u> a system.
- III. The direction of current is conventional current: the direction in which positive charge would drift.
- IV. Assume all batteries and meters are ideal unless otherwise stated.
- V. Assume edge effects for the electric field of a parallel plate capacitor unless otherwise stated.
- VI. For any isolated electrically charged object, the electric potential is defined as zero at infinite distance from the charged object.
